DETAILED ACTION

Allowable Subject Matter

Claims 1, 4 – 9, 12 – 15, 17 – 21 and 24 – 31 are allowed.

The following is an examiner's statement of reasons for allowance:

Ramsey teaches a microfluidic apparatus comprising: a first channel or specimen flow pass (*e.g.*, 26); a second channel or reagent flow pass (*e.g.*, 28) in fluid communication with the specimen flow pass; a confluence flow pass (38, 40 & 44); a sensing portion; and a force applying means (*e.g.*, electrokinetic fluid transport *via* voltage controller 46) (see col. 6, line 60 – col. 8, line 20; figures 1 & 30). Ramsey teaches that with laser-induced fluorescence, the point of detection can be placed anywhere along the separation column (see col. 21, lines 33 – 46).

Bentsen *et al.* do teach microfluidic devices having microchannels having vertically tapered inlet and outlet diffusers for piezoelectric valve-less diffuser micropumps for facilitating fluid transport (see col. 4, lines 36 – 48).

The cited prior art neither teach or fairly suggest the further incorporation within the Ramsey apparatus a micropump which is capable of bi-directional suction and discharge of the specimen sample and the reagent and is provided at a specimen flow pass and the reagent flow pass or at the confluence flow pass; and a driver which applies a driving pulse to the micropump to drive the micropump for reciprocating motion. The cited prior art neither teach or fairly suggest the method step of detecting a change in the reciprocal movement due to a reaction of the specimen and the reagent within the flow pass.
